1. This office action is in response to the amendment filed September 22, 2005.
2. The rejection under 35 USC 112, second paragraph has been withdrawn in response to the amendment.
3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim 38 is rejected under 35 U.S.C. 103(a) as being unpatentable over Clarke et al (US Patent No. 5,825,936) in view of Chang et al (US Patent No. 5,572,597).

Clarke teaches a method of image enhancement, comprising: learning a set of partitioned least-squares filters derived from a given set of fingerprint images and expert-developed ground truth pairs (column 6, lines 20-59); and for each of at least some sub-regions of an image, convolving at least one respective filter with an input fingerprint image of the sub region to obtain an enhanced image (column 6, line 53-

column 14, line 26). Clarke does not teach details on the image being a fingerprint image. However, many techniques taught in the image processing are applicable to different types of image. Chang teaches classifying fingerprint images into different types based on the sub region image characteristics, similar to Clarke (abstract, lines 6-8). Clarke teaches determining a value for each of one or more characteristics of the sub region, the characteristics being of a subject of the sub region (column 6, lines 20-59). Given these references at the time the invention was made, it would have been obvious to one of ordinary skill in the art to incorporate fingerprint image into Clarke's system that performs similar processing as in Chang. Motivation to do so would be they are both classifying images into different types based on the sub region image characteristics and that many techniques taught in the image processing are applicable to different types of image.

4. Claims 1-8 and 11-24 are allowed.

5. Claim 39 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the

Art Unit: 2625

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
